

BUSINESS REQUIREMENTS DOCUMENT (BRD)

Coffee Shop Chain – Full Business Intelligence Project

1. Project Overview

The Coffee Shop Chain operates multiple stores across Manhattan, offering a variety of beverages and specialty products. Leadership requires a unified BI solution to understand sales performance, product trends, store efficiency, and time-based behavior. This project will deliver a complete business intelligence dashboard that supports strategic and operational decision-making.

2. Business Problem

The organization lacks a consolidated, analytical view of its operations. Key questions remain unanswered:

- Which stores perform best and why
- What products and categories drive revenue
- How sales vary by hour, day, and month
- Which product types are growing or declining
- How pricing and quantity patterns influence sales
- What operational adjustments can improve performance

Without this visibility, decisions around staffing, inventory, pricing, and promotions are based on intuition rather than data.

3. Project Objectives

Primary Objectives

- Build a centralized BI dashboard for all coffee shop sales.
- Provide actionable insights into store, product, and time-based performance.
- Enable leadership to make data-driven decisions.

Success Criteria

- Dashboard answers at least 90% of stakeholder questions without additional analysis.
- All KPIs refresh accurately and automatically.
- Insights lead to at least three actionable recommendations.

4. Stakeholders

Role	Interest
CEO	High-level performance, growth trends
Operations Manager	Staffing store efficiency, peak hours
Inventory Manager	Product demand, stock planning
Marketing Lead	Promotions, product mix, customer behavior
Finance Analyst	Revenue, pricing, profitability

5. Scope

In Scope

- Sales performance analysis
- Store comparison
- Product and category analysis
- Time-based analysis (hour, day, month, season)
- Advanced DAX KPIs
- Interactive Power BI dashboard
- Full documentation (BRD + SRD)

Out of Scope

- Customer-level loyalty analysis (no customer IDs)
- Profit margin analysis (no cost data)
- Predictive modeling (future phase)

6. Data Sources

- Coffee Shop Sales Dataset (149,116 rows) Includes transaction details, store info, product info, pricing, and timestamps.

7. Assumptions & Constraints

Assumptions

- All transactions are valid and complete.
- Pricing is consistent within each product ID.
- Store IDs uniquely identify store locations.

Constraints

- No customer identifiers → limited customer segmentation.
- No cost data → revenue-only profitability analysis.

8. Expected Deliverables

- Full BI dashboard (Power BI)
- BRD (PDF)
- SRD (PDF)
- DAX measure library
- Data model diagram
- Insight summary + recommendations
